This professional development session is designed for graduate students and researchers who have yet to use secondary data. Description: This workshop is designed to give participants an introduction to using Stata for secondary data analysis. This PDMC presentation will include information on merging and appending data, cleaning and recoding variables, and conducting basic descriptive, bivariate, and multivariable analyses, as well as creating graphs.

Objectives:

Participants will learn about some of the benefits and drawbacks of using various statistical software packages

Participants will learn about resources available to them that can help them learn how to use Stata

Participants will learn about some important practices in quality data management

Participants will learn about some basic Stata commands
